

Innovation Concept report

Task 1: Innovation Concept report (Team-based)

Due date: 28th Jul 2025 Mark Allocated: 20% of your final mark

Recommended Word-Count Range: 800 words for each team member (4000 for 5 team members and 4800 for 6 team members).

Task overview

Your team has identified a **problem** within your specific Indigenous township. Your team is working on 5 or 6 different design ideas for the need/challenge of the particular community living in the township. The problem was defined based on the **project requirements** which are focused on how to use emerging technologies to solve a problem for the remote indigenous community.

This Assessment 1 - This assignment is about your team's Innovation concept. The innovation concept report expects the team to explain your team design ideas based on your identified problem.

The Innovation concept report should include the following

- Each **team** should explain the project overview and identified challenges in part A.
- Each **team** should explain 5 design ideas(for 5 team members) or 6 design ideas (for 6 team members) and discuss the following in part B.

After the team submission, the facilitator will give feedback on the further development of the design idea toward the **project outcome** (project final report).

Innovation Concept report

Create your team template for this innovative concept based on the requirements below. The body of the innovation concept report should be organised with clear and consistent headings and sub-headings that make it easy to identify all the information required. Tables and figures should be consistently captioned. The report should contain:

Note: Your team should decide how each team member should contribute. Your team report should not have more than 18% plagiarised content excluding references. The team is responsible for controlling plagiarised content. Don't use any images copied from the internet and other resources.

Part A

1.1 Project Overview

1.2 A brief introduction to the Identified Challenge/problem

Part B

2.1 Design Idea 1

- A description of the design idea
 - Design idea - A detailed explanation of the design idea
 - Must include any drawings of your design idea using simple digital tools (images of paper-drawn pictures not allowed)
- Design Specifications
 - Each design idea should include three approaches, one technology for each approach, and two different devices (check workshop slides for in-scope technologies and devices)
 - List of hardware and software requirements (Explain in detail each hardware/software required)
 - How does your design idea work/function? (explain in detail)
- Benefits of design idea
 - What are the benefits of the design (at least 3 benefits)?
 - How will it impact the community (at least 3 impacts)?
 - How the design is culturally appropriate for the community/environment?
 - How does the design idea benefit the community in accordance with the guidelines such as access & equity, health & safety, appropriateness, affordability, environmental health, and sustainable livelihoods (few based on the design idea)
- Constraints of design idea
 - What are some of the potential challenges identified when using the design for present and future needs (at least 2 constraints)?

2.2 Design Idea 2

- A description of the design idea
 - Design idea - A detailed explanation of the design idea
 - Must include any drawings of your design idea using simple digital tools (images of paper-drawn pictures not allowed)
- Design Specifications
 - Each design idea should include three approaches, one technology for each approach, and two different devices (check workshop slides for in-scope technologies and devices)
 - List of hardware and software requirements (Explain in detail each hardware/software required)
 - How does your design idea work/function? (explain in detail)
- Benefits of design idea
 - What are the benefits of the design (at least 3 benefits)?
 - How will it impact the community (at least 3 impacts)?
 - How the design is culturally appropriate for the community/environment?

- How does the design idea benefit the community in accordance with the guidelines such as access & equity, health & safety, appropriateness, affordability, environmental health, and sustainable livelihoods (few based on the design idea)
- Constraints of design idea
 - What are some of the potential challenges identified when using the design for present and future needs (at least 2 constraints)?

2.3 Design Idea 3

- A description of the design idea
 - Design idea - A detailed explanation of the design idea
 - Must include any drawings of your design idea using simple digital tools (images of paper-drawn pictures not allowed)
- Design Specifications
 - Each design idea should include three approaches, one technology for each approach, and two different devices (check workshop slides for in-scope technologies and devices)
 - List of hardware and software requirements (Explain in detail each hardware/software required)
 - How does your design idea work/function? (explain in detail)
- Benefits of design idea
 - What are the benefits of the design (at least 3 benefits)?
 - How will it impact the community (at least 3 impacts)?
 - How the design is culturally appropriate for the community/environment?
 - How does the design idea benefit the community in accordance with the guidelines such as access & equity, health & safety, appropriateness, affordability, environmental health, and sustainable livelihoods (few based on the design idea)
- Constraints of design idea
 - What are some of the potential challenges identified when using the design for present and future needs (at least 2 constraints)?

2.4 Design Idea 4

- A description of the design idea
 - Design idea - A detailed explanation of the design idea
 - Must include any drawings of your design idea using simple digital tools (images of paper-drawn pictures not allowed)
- Design Specifications
 - Each design idea should include three approaches, one technology for each approach, and two different devices (check workshop slides for in-scope technologies and devices)
 - List of hardware and software requirements (Explain in detail each hardware/software required)
 - How does your design idea work/function? (explain in detail)
- Benefits of design idea

- What are the benefits of the design (at least 3 benefits)?
- How will it impact the community (at least 3 impacts)?
- How the design is culturally appropriate for the community/environment?
- How does the design idea benefit the community in accordance with the guidelines such as access & equity, health & safety, appropriateness, affordability, environmental health, and sustainable livelihoods (few based on the design idea)
- Constraints of design idea
 - What are some of the potential challenges identified when using the design for present and future needs (at least 2 constraints)?

2.5 Design Idea 5

- A description of the design idea
 - Design idea - A detailed explanation of the design idea
 - Must include any drawings of your design idea using simple digital tools (images of paper-drawn pictures not allowed)
- Design Specifications
 - Each design idea should include three approaches, one technology for each approach, and two different devices (check workshop slides for in-scope technologies and devices)
 - List of hardware and software requirements (Explain in detail each hardware/software required)
 - How does your design idea work/function? (explain in detail)
- Benefits of design idea
 - What are the benefits of the design (at least 3 benefits)?
 - How will it impact the community (at least 3 impacts)?
 - How the design is culturally appropriate for the community/environment?
 - How does the design idea benefit the community in accordance with the guidelines such as access & equity, health & safety, appropriateness, affordability, environmental health, and sustainable livelihoods (few based on the design idea)
- Constraints of design idea
 - What are some of the potential challenges identified when using the design for present and future needs (at least 2 constraints)?

Submission requirements

- This assignment is to be undertaken in a team with an equal contribution by all team members. Your submission should include Team Submission Coversheet as well as the Team Breakdown within the document.
- Although the page limit varies for different team sizes (**for 5 Team members - between 12- 15, for 6 team members 14- 16**) you must include all necessary components of the Design Brief as outlined in the template provided.

- A written report is to be prepared using an appropriate academic writing style and to include a list of references. Refer to the APA or IEEE referencing style available at the Swinburne Library
- The submitted report file format must be in doc or pdf format.
- please specify which sections were written by each team member. Easy to assess and grade each team member's work.
- Don't waste time with fancy layouts, colours, cover pages, and so on. A simple text-based format is all that is needed with the report layout consisting of a few sections of text (with section headings). Use photos or diagrams sparingly and only if necessary and/or relevant to include in your report. Just use a basic and common text font such as Arial or Times New Roman with at least a 12-point font size for body text. Single-spaced paragraphs are acceptable.
- The due date for the submission is 27th Sep 2024, 23:59 Earlier submission is encouraged.

Formatting and Referencing Style

The report should follow these guidelines:

- Standard referencing style is sufficient: APA or IEEE referencing style
- The report should be presented using any writing template with a single column, a minimum of 12pt font with 1 or 1.15 line spacing (please DO NOT use any template with double columns).
- The cover page needs to include official student names and numbers. A word count should be included at the end of the report (before references).
- Page numbers are required. Each page should have a footer with your group id and a page number.
- All figures and tables should have meaningful captions. These can be in a smaller font size but should be legible.

The report should be submitted to Turnitin via the appropriate link on Canvas. Note that Canvas and Turnitin may sometimes have outages beyond our control, so it is wise **not to leave submissions to the last minute** – you can overwrite previous submissions.

Content from assessed tasks in this unit (even your own tasks) cannot be reused verbatim. However, you can reference papers and sources you included in previous tasks
